DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over:

JAPANESE PATENT APPLICATION 63-267550 (JP '550);

in view of YANO ET AL (US 6,926,945).

JP '550 discloses a high transparency coated polyester film, wherein the coating comprises a sulfonated copolyester containing 0.5-15 mol% sulfonate group, and further comprises a zirconium compound (e.g., zirconium acetate) in typical ratios of copolyester to zirconium compound of 100,000/5 to 100,000/50,000. (Abstract)

YANO ET AL '945 discloses that it is well known in the art to apply copolyester coatings to biaxially oriented polyester films via in-line coating (coating between orientation steps), wherein said copolyesters typically have Tg values of 50-100 C in order to form films with improved adhesion and film handling properties which are suitable for various optical applications. The reference further discloses that it is well known in the art to apply radiation-curable hard coats comprising acrylic or silane-based polymers in order to improve durability

and abrasion resistance. (entire document; columns 3-4; line 47-65, col. 8; line 2-17, col. 9; line 13-23, col. 10)

It would have been obvious for one of ordinary skill in the art at the time the invention was made to use known copolyesters as the binders for the coatings in YANO ET AL '945 in order to obtain films with improved adhesion and handling properties. One of ordinary skill in the art would have utilized conventional coating methods to apply said coatings.
